

Digital Art Demo

FAA The Gallery March 30th 11-12

If you are intrigued by the idea of Computer Art, Digitally Created art, Art in 3D Space, Come to this Demo and check it out...

Patricia Hartman - patriciahartman.com - art@hitekdesigns.com

Rendered Ship

Wireframe Ship

Digital art is any artistic endeavor that uses a computer to save the work in digital format. this includes Drawing with your finger on a touch screen, combining photos to make a collage or composite, using math formulae to represent a line drawing (vector graphics) and creating a polygonal mesh in 3D space, then rendering the result to create a 2D picture.

3D space apps usually show a wireframe version of all objects, a shaded version and a rendered version in which the result is a flat image that can then be printed and framed or used in a commercial, TV ad, a sign or to create fine art.

This course will concentrate on creating and using objects in 3D space, rendering them and printing or producing for online or media viewing.

Several types of digital art will be discussed in this survey demo. The classes will highlight art using 3D objects and rendering to create artwork which will then be finished with post production using graphic editors such as Adobe Photoshop, Photoshop Express, Corel products etc..

There are several rendering and modeling products available either free or for modest amounts. All information needed for the course will be demonstrated and discussed at the Demo..
